Summary

- Full-stack developer (Next.js, React, Prisma, Node.js, Python) with a co-founder track record: shipped a reservation/analytics SaaS from prototype to deployment.
- GenAI/LLM engineering: local-LLM agents (Ollama/LM Studio), prompt and context design, RAG concepts; PII-aware browser agent for SIH 2026 (ISRO).
- Side portfolio: open-source ESP32 quadruped robot and ROS2 swarm simulation; completed the 360 Labs AI test week.

Experience

Co-founder & Product Designer — Stealth-mode SaaS **(ongoing)**

- Leading product strategy, technical architecture, and investor outreach for a reservation and analytics SaaS platform.
- Owns the full product lifecycle: ideation, UX design, full-stack development, and deployment.

Lead Developer — Gurtai Bot **(ongoing)**

- Built a Python-based Telegram AI assistant with local LLM integration via Ollama for privacy-first, zero API-cost responses.
- Designed a plugin-based modular architecture for extensible workflow automation; containerized with Docker.

SIH 2026 (ISRO) — PS171 Browser Agent **Optimization & Testing Lead**

- PII-aware browser agent (WXT/React extension + backend) for ISRO's Smart India Hackathon; led E2E test automation, performance optimization, and live-run diagnostics.
- Produced judge-facing project documentation and demo assets for the final submission.

Software Projects

CamPass — Student Safety & Tracking **(Flutter, Node.js, PostgreSQL, FCM)**

- Real-time geofence tracking, SOS alerts, and smart notifications via Firebase Cloud Messaging; digital pass system with barcode scanning and role-based access.

RiceScan — AI Crop-Disease Detection **(Python, EfficientNetV2S)**

- AI-powered agricultural app (EfficientNetV2S) with local knowledge base for symptoms/treatments and a feedback loop for model retraining.

Hardware & Robotics Projects

Side Projects

- **Sesame Robot** (open source): ESP32 quadruped — 8× MG90S servos, Wi-Fi/captive-portal control, REST + OLED firmware, power-failure postmortem (github.com/Yashop965/sesame-robot).
- **Swarm Drone System**: ROS2 Humble + Gazebo carrier-hexacopter — capability-aware task scoring, MQTT mesh bridge, 4/4 validated task assignments.
- **Other**: DIY camera prototypes; drone ESC/motor-driver testing (30 A, Hobbywing, DShot).

Experiments & Ops

- **Ops:** Docker for reproducible environments (Gurtai, dev fleets); CI/CD failure triage (local-pass/CI-fail); E2E test automation (Playwright).
- **Local AI inference:** Ollama and LM Studio — running and evaluating local LLMs for agent experiments and Gurtai; prompt and context tuning.

Skills

- **Languages:** Python, JavaScript, TypeScript, C++, Dart, SQL, Bash
- **AI & ML:** GenAI applications, prompt engineering, LLMOps, AI agents & chatbots, local inference (Ollama, LM Studio), RAG concepts, OpenCV, EfficientNet (transfer learning)
- **Web & Mobile:** Next.js, React, Node.js, Express, Flutter, Prisma/PostgreSQL, Firebase, Docker
- **Embedded & Hardware:** ESP32, Raspberry Pi, Arduino, ROS2 (Humble), Gazebo, servo/PWM/I2C, breadboard & schematic-level circuit work
- **Tools:** Git, CI/CD debugging, Playwright E2E, Vercel, ESLint, WSL2, AWS (basics)

Education

- **IILM University, Gurugram** — B.Tech, Computer Science & Engineering (2025–2029)

Certifications

- DeepLearning.AI — *AI Python for Beginners*; *Build Rich-Context AI Apps with Anthropic*
- 360 Labs — AI Test Work Week (Aug 2026)
