Yash Raj Shrivastava

Co-founder & Full-Stack Developer

Gurugram, India yashop965@gmail.com linkedin.com/in/yash-shrivastava

github.com/Yashop965

PROFESSIONAL SUMMARY

Co-founder, product designer, and full-stack developer with a B.Tech in Computer Science. I design and build scalable, privacy-first SaaS platforms and polished consumer experiences. Experienced in shipping web applications using Python and JavaScript, designing robust data models with Prisma, and driving product development from prototype to deployment. Proven commitment to continuous learning in AI through specialized courses in GenAI applications and LLMOps.

HARDWARE PROJECTS PORTFOLIO

Author: Yash Raj Shrivastava

Swarm Drone System (Raspberry Pi 5 + ROS)

- **Objective:** Coordinated swarm of drones for autonomous tasks.
- **Hardware:** Raspberry Pi 5, ESCs, motor drivers, FlySky FS-i6 controller.
- **Software:** ROS, Python scripts.
- **Highlights:** Multi-drone synchronization, real-time telemetry, modular scaling.

RiceScan (Mobile + Hardware Integration)

- **Objective:** Analyze rice grain images for classification and quality estimation.
- **Hardware:** Custom camera setup with controlled lighting.
- **Software:** Flutter mobile app, AI/ML backend.
- **Pipeline:** Image capture → Segmentation → Classification → Percentage estimation.
- **Impact:** Quality control for farmers and food organizations.

DIY Electronics & Camera Building

- **Objective:** Experiment with custom electronics and optics.
- **Hardware:** Sensors, lenses, microcontrollers.
- **Projects:** Exposure control systems, custom camera prototypes.
- **Learning Outcomes:** Optics understanding, electronics assembly skills.

Drone Components Research & Assembly

- **Objective:** Optimize drone performance through component testing.
- **Hardware:** ESC 30A, Hobbywing ESC, DShot ESC, motor drivers.
- **Focus Areas:** Flight stability, power efficiency, compatibility testing.

TECHNICAL SKILLS

Languages

Python, JavaScript, SQL, C (learning)

AI & Machine Learning

GenAI Applications, Prompt Engineering, LLMOps, AI Chatbots

Frameworks & Libraries

Next.js, React, NextAuth.js

Database & ORM

PostgreSQL, Prisma (Schema & Seeding)

Styling & Design

Tailwind CSS, Component-Driven Design

Developer Tools

Git, Docker (familiar), Vercel, ESLint

EXPERIENCE

Co-founder & Product Designer — Stealth-mode SaaS *Oct 2025 – Present*

- Leading product strategy, technical architecture, and investor outreach for a new reservation and analytics SaaS platform.
- Responsible for the entire product lifecycle, from initial ideation and UX design to full-stack development and deployment.

Developer & Deployment Lead — Gurtai Bot *Oct 2025 – Present*

- Single-handedly built and deployed a Gemini-powered Telegram assistant designed for high extensibility and developer productivity.
- Implemented secure environment scripting and containerized the application with Docker for consistent and reliable deployment.

SELECTED PROJECTS

CamPass (Student Safety & Tracking System)

- Developed a comprehensive location tracking and safety application to ensure the security of students within and outside campus premises.
- Implemented real-time geofence tracking, SOS alerts, and a smart notification system using Firebase Cloud Messaging.
- Engineered a digital pass system with barcode scanning and role-based access for Students, Parents, Wardens, Guards, and Admins.
- **Tech Stack:** Flutter, Node.js, Express, PostgreSQL, Firebase Cloud Messaging, Google Maps API.

RiceScan (AI Crop Disease Detection)

- Built an AI-powered agricultural application utilizing an EfficientNetV2S model to accurately identify crop diseases from user-uploaded images.
- Integrated a comprehensive local knowledge base to provide farmers with detailed symptoms, 7-day treatment plans, and context-aware regional farming insights.
- Designed a continuous learning feedback loop enabling users to report incorrect predictions, allowing for periodic retraining of the server-side model.
- **Tech Stack:** Python, Machine Learning (EfficientNetV2S), Node.js, REST APIs.

Gurtai (Personal AI Assistant)

- Architected a Gemini-powered Telegram assistant with a plugin-based system, allowing for modular and extensible integrations via JSON-RPC.
- Engineered for personal workflow automation, focusing on developer-centric tasks and information retrieval.
- **Tech Stack:** Python, Gemini API, Telegram Bot API, Docker.

EDUCATION

IILM University, Gurugram

2025 – 2029

Bachelor of Technology (B.Tech), Computer Science & Engineering

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

DeepLearning.AI

- AI Python for Beginners
- Build Rich-Context AI Apps with Anthropic
